Re: MEIDINGER, Donald  
Employer: San Joaquin Co.  
MAD  
Date of Injury; 09/04/90  
Claim #6938910003  
File #3582

To Whom It May Concern:

Don returns and is 11-1/2 months postop. He is doing quite well and has only occasional mild pain. Range of motion is 0 - 130 degrees. Neurovascular status is intact. Again, he has a 2+ posterior Drawer with a good endpoint. There is a 2+ opening to valgus but again with a good endpoint.

I feel the patient is permanent and stationary. I feel he is able to perform all activities in a full work status. There are no limitations.

Sincerely,

  
Darryl W. Kitayama, M.D.

DWK/gp
