Re: MEIDINGER, Don
File #3582

To Whom It May Concern:

Don is 2 days postop and is doing well. Range of motion is 10 - 80 degrees. There is minimal pain. Neurovascular status is intact. The wounds are clean. There is no evidence of infection. We will begin vigorous physical therapy. I will see him back in 1 week.

Sincerely,

Darryl W. Kitayama, M.D.
