Re: MEIDINGER, Don
File #3582

To Whom It May Concern:

Don has occasional medial pain but this is much improved. His strength is likewise much improved with physical therapy and exercises. I feel we will continue the exercise as well as physical therapy for 2 more weeks. I will see him back thereafter. He remains unable to work at this time. I will re-evaluate his work situation in 2 weeks.

Sincerely,

Darryl W. Kitayama, M.D.
