Re: MEIDINGER, Don
File #3582

To Whom It May Concern:

Don returns and is essentially asymptomatic now. He is 10 weeks postop. His range of motion is full and he is having no pain or catching sensation. I feel he can continue with the home exercises. We will discontinue physical therapy. I feel he will be able to return to work as of June 8, 1992.

Sincerely,

Darryl W. Kitayama, M.D.
