Re: MEIDINGER, Donald
File #3582

To Whom It May Concern:

Don has had a slight flare-up of pain along the medial joint. There is a minimal popping sensation but no locking or giving way. His range of motion remains full. There is no effusion. He has taken some Advil with some relief and thus I will place him on a course of Lodine, 300 mg. p.o. b.i.d. with meals. The risk of liver, ulcer and kidney disorder were discussed. The patient is to stop the medication for any gastric upset. He is not to drink any alcohol or take aspirin or Advil while on the medication. He is to continue work full time. I will see him back in 3 weeks.

Sincerely,

Darryl W. Kitayama, M.D.

DWK/gp

Re: MEIDINGER, Don
File #3582

To Whom It May Concern:

Don returns and is doing well except he does have pain along the medial joint at times. This occurs after doing his physical therapy. Range of motion is 0 - 130 and this is slightly improved. I feel we will continue with the therapy. I do not feel at this time that he is quite ready to return to work. I will re-evaluate the situation in 2 weeks.

Sincerely,

Darryl W. Kitayama, M.D.
