Re: MEIDINGER, Don  
File #3582

To Whom It May Concern:

Don is 6 months postop and has full range of motion. Nevertheless with full work he complains of occasional medial joint pain. We have discussed alternatives. He will try a course of Lodine, 300 mg. p.o. b.i.d. with meals. The risk of liver, ulcer and kidney disorder were discussed. He is to stop the medication for any gastric upset. He is not to drink alcohol or take aspirin or Advil while on the medication. He continues to work full duty. Of note is that the patient did not take the medication last visit and he will try it at this time.

Sincerely,

Darryl W. Kitayama, M.D.
