DIAGNOSIS

1. 836.1 /717.7 /

WORK STATUS:

- Remain off work until:
- Return to modified work with the following limitations and restrictions:
- Return to full duty with no limitations or restrictions.
- Continue with: Modified Work Full Duty

Date of Exam: July 26, 2011 Part of Body: Right Knee

Subjective: Tiffany reinjured her right knee 1 month ago. She was walking in a field and struck what she describes as a large metal T-post. This gave her a small wound. She continues to have very severe medial joint pain and catching. She was off work for 4 days and treated at U.S. HealthWorks. She is now back to full duty. She is convinced that she has another meniscal tear, as she has had increasing anterior medial joint pain with catching.

Objective: Physical examination reveals good range of motion of her knee, mild soft tissue swelling over the anterior medial joint line, as well as a healed laceration just distal to the anterior medial joint line. No swelling about her calf, no effusion, good range of motion.

ASSESSMENT: Possible meniscal tear, although her mechanism of trauma appears to be more direct, rather than a twisting injury. Since symptoms have not improved, it is reasonable to order an MRI of her knee to rule out internal derangement such as a meniscal tear. She will continue full duty, and I will see her in the office after the MRI of the right knee.

I have not violated Labor Code Section 139.3, and the contents of the report and bill are true and correct to the best of my knowledge. This statement is made under penalty of perjury in San Joaquin County, CA, dated 7-27-11.
