This is Tiffany Anderson employee of San Joaquin County Mosquito & Vector Control District.
It has been a few weeks since our meeting with regards to the Formalin treatments at the White Slough Facility.

I am inquiring as to if you can give me a call to update me on the status of your investigation? I have some you can not provide

1) When Formalin is used on any site at a quantity with a 75 gallon concentrate treatment what is the responsibility to monitor for over exposure?

2) Did a violation occur by when it was obvious to the employer that their employees were showing signs of over exposure?
3) What was they employers duty when I was sent to their urgent care after having a full body reaction resulted after working at the site?

4) What are the duties and required laws in regarding to
    a) posting
    b) reporting
    4) monitoring
    5) responding to over exposure symptoms of the employees
4) If the fish were dying how can it be believed that other life would not be

effected?
5) If the highest PPE's were a requirement when the applications was made, how can employees return to the site with no expectations they would not be harmed?

Is there a website you can refer me to where I can find an information series that can answer my questions?
